

DHA OMEGA-3

IMPROVING HEALTH NATURALLY

EXCLUSIVE 
IFA EQUINE PACK

OMEGA-3 is an essential fat. Your body needs it for many functions, but can't make it, so it must be obtained through food.

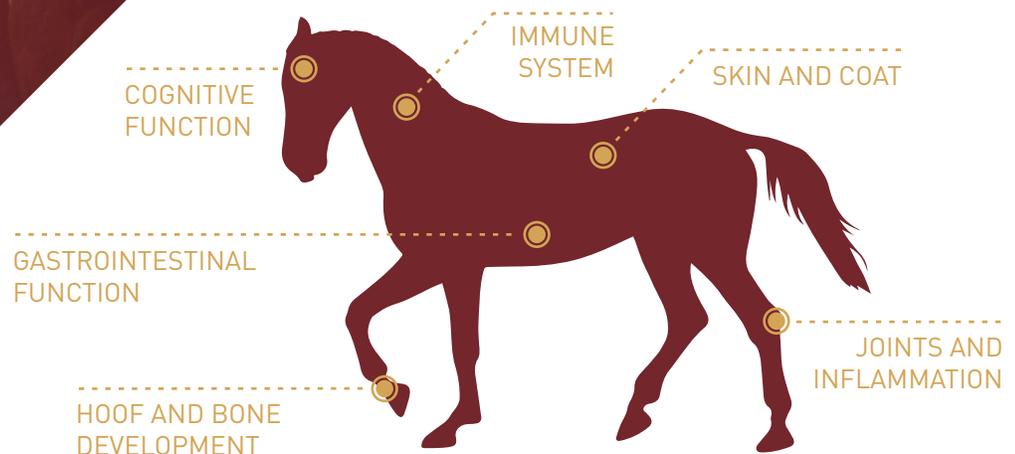

IFA's Exclusive Equine Pack enhances every bag of Premium IFA Equine Feeds to another level of nutrition, providing key ingredients, such as DHA Omega-3's, in the most available form for your horse.

WHY ARE OMEGA-3'S SPECIAL?

Omega-3 fats have been shown to support a calm demeanor, immune function, gastrointestinal function, joint health, reduction in inflammation and more. Omega-3 fats also help prevent dry skin and dull coats and support weight maintenance, hoof integrity, and reproduction.

OMEGA-3 BENEFITS FOR HORSES

WHY ARE OMEGA-3 FATS SO IMPORTANT?

They are an **integral part of the cell membranes** throughout the body and affect the function of the cell receptors in these membranes.

They provide a starting point for **making hormones that regulate blood clotting**, contraction and relaxation of artery walls, and inflammation.

They also bind to receptors in cells that **regulate genetic function.**

An improved diet will boost the health of your herd; helping them thrive and reach their genetic potential. Healthy horses will eat and produce more efficiently, ensuring they are performing at their maximum ability. It doesn't matter whether you live on a farm or own a backyard horse; maintaining happy, healthy horses is essential.

OMEGA-3 BENEFITS

Reproductive benefits include:

- ✓ Improved fertility
- ✓ Improved colostrum quality
- ✓ Enhanced passive transfer of antibodies to foals
- ✓ Increased sperm concentration, motility, and viability

Supports brain and eye development

Supports gastrointestinal function

Enhances bone metabolism and development

Improves glucose tolerance

Protects joints and ligaments

Strengthens immune function

Improves cognitive function

Improves learning and behavior

Reduces inflammatory response

DHA OMEGA-3 VS. OTHER FATTY ACIDS

Provides an energy source	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

DHA is a long chain Omega-3 fatty acid important for brain and eye development and function throughout life. DHA is the most abundant Omega-3 fatty acid in the brain and retina and is naturally found in breast milk.

EPA is a long chain Omega-3 fatty acid important for overall health, and the body doesn't store it.

ALA is a short chain Omega-3 fatty acid that serves as a source of energy and as a building block for DHA & EPA.
